

World leaders in creasing technology, Tech-ni-fold, showcase new products

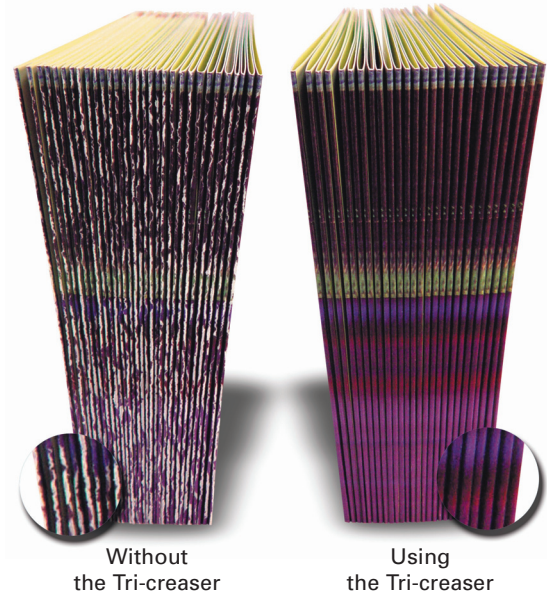

Formed in 1999 **Tech-ni-fold Ltd** have fast become the leading suppliers of rotary creasing solutions to the global printing industry.

Their main product, the Tri-creaser has quite simply revolutionised the way creasing is carried out on folding machines and this claim is backed up by their 15,000 sales recorded in November 2005.

Heidelberg top the list of many world-renowned printing machine manufacturers that regularly purchase solutions from the UK innovator.

Presently Tech-ni-fold serve an exclusive distribution network in all major territories including the USA, Germany, France, Italy and Australia and this is undoubtedly where their future success lies as 85% of their turnover is made up through export.

Tech-ni-fold will use their interactive showcase of new products in combination with specially manufactured creasing units as well as universally known folding equipment.

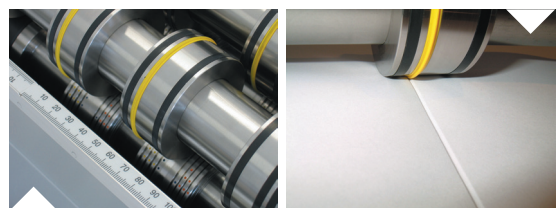

New launch: Digital Speed-Creaser

New Breakthrough In Digital Finishing Technology

Tech-ni-fold will undoubtedly attract the attention of potential partners when they also unveil their new Table-top Digital creasing machine, designed to bring a new dimension to this growing market. The Speed-creaser will be equipped with a host of new devices that are set to bring it to the forefront of this competitive sector with its ability to micro-perforate, slit and kiss-cut.

If your company is serious about combating cracking problems or adding value to any finishing operations **make stand G-55 in Hall 1 your first port of call.**

Unrivalled depth of crease

Patented creasing technology
