

Excellent results,
even on digitally
printed materials

Does fibre cracking threaten to spoil your folding work?

**Fibre cracking is an age-old problem.
This is usually the way it works...**

The customer wants his job in a hurry so you rush it through in record time, only to find the material **fibre cracks** along the spine.

You have promised the job today, so here are your options:

- Crease the job on your cylinder (if you have one)
– if not send it away and wait
- Ask the customer if he will accept the cracking

What is the alternative?

...place the Tri-creaser Fast Fit onto your existing folding machine's exit shafts and eliminate fibre cracking forever!!!

Please test crease by folding...

This device is so simple to use, even an unskilled person will be able to produce cylinder quality creasing within minutes and also have the benefit of folding the work at the same time.

Here Are Just Some of the Benefits:

- No more expensive transport fees
- No waiting for the slow cylinder
- Cuts out a process altogether
- You can crease and fold at the same time
- Works as fast as your folding machine can run
- No costly specialist machine purchase
- Allows you to deliver your finished product on time
- Pays for itself within 1-3 job runs
