

The Print Finishers' Best Kept Secret

How to turn your existing folding machine into a cylinder quality creasing machine

Fibre cracking occurs when the paper stock or toner (if digital print) is scored by a metallic device. This results in broken and damaged fibres which crack when folded, often causing jobs to be rejected.

The Tri-Creaser totally eliminates cracking as its patented rubber rotary creasing device gently stretches and manipulates the fibres producing a U shaped groove. What's more you can run it as fast as your machine will go! See the demonstration video at www.technifold.co.uk/pw

With over 30,000 sold worldwide and a no quibble money back guarantee you simply can't go wrong...

The Tri-Creaser's unique patented design and specially formulated rubber compound gently stretch and manipulate paper fibres into a U shaped groove totally eliminating cracking – guaranteed!

"The Tri-Creaser is simple to use with 100% quality – on average I have saved £22,500 per annum." B. Tucker, BRG Print Finishers, Stratford, England

The Tri-Creaser has been designed by a print finisher, so it is quick and easy to set up and the consumable element – the colour coded rubber 'o' rings – can last up to 1 million impressions. So, at less than £10.00 each, the running costs are almost zero!

"The Tri-Creaser is very easy to use. Our operators have had very little trouble in setting up. It is fast and extremely effective. Customers like the look of our jobs – that gives us two advantages – cost and quality. The Tri-Creaser must have paid for itself 10 times over in the first year."

A. Southworth, Rochester Print Finishers, Rochester, England

The unique design makes working with different stocks easier than anything else in the market. The operator simply chooses the specific 'o' ring for the paper weight – the 'o' rings are all colour coded so this task is really simple. The set up takes a few seconds by an experienced operator but a novice can change rings in a minute or two. The device self centres when the male and female stainless steel components are brought together. It really couldn't be simpler.

If you are a small, medium or large sized printer, looking to reduce out-sourced print finishing costs; breathe life into your existing folding machine; OR reduce costly sub-standard creasing – then why not order one online NOW, with a full 'no-quibble' money back guarantee if you don't like the Tri-Creaser after trying it – what have you got to lose?

• Tri-Creaser Fast Fit – £997

Turns your folder into a powerful creasing and folding machine that eliminates fibre cracking at up to 30,000 products an hour.

• Micro Perf & Cut Multi-Tool – £897

Create micro-perfed sheets from your folding or scoring machine that run through any laser printer, copier or digital press.

• Micro Perf, Cut & Crease Combo – £1549

The ultimate time and money saving folding machine accessory that has everything built-in so you avoid out-sourcing forever.
