

The Spine & Hinge Creaser is compatible with the following Muller Martini machines:

- Corona
- Acoro
- Bolero
- Normbinder
- Starbinder

Global Leaders in creasing technology
Eliminating fibre cracking 100%

Introducing the Spine & Hinge Creaser

For Muller Martini Perfect Binders

Installing Tech-ni-fold's **Spine & Hinge Creaser** is like replacing your cover feeder with a Letterpress creasing Cylinder or Platen, it's that good!!

← See the result for yourself by hand folding the four creases to form a book jacket

Spine & Hinge Creaser

Ingenious split-crease design

Letterpress quality results on your Muller Binding machine

Installing Tech-ni-fold's Spine & Hinge Creaser is like replacing your cover feeder with a Letter press creasing Cylinder, it's that good!!

The revolutionary four crease device works like magic, even on UV coated or laminated covers regardless of grain direction or the amount of solid ink coverage applied. Not only does the Spine & Hinge Creaser prevent the spine of the book from cracking out it also produces a more defined result, creating greater flexibility.

Ingenious Split Creasing band technology

The Spine & Hinge Creaser incorporates another ground breaking and ingenious development that solves the major problem of having to remove the shafts from the machine to replace crease settings.

The uniquely profiled split creasing bands were designed so that they can be inserted into a special locking male/female hub located on the shafts, and this can be carried out within seconds. Replacement of crease style is quick and a major feature of this innovative and patented creasing system.

Gentle rotary action is the key

Unlike other rotary methods the Spine & Hinge Creaser employs the world famous and patented rubber creasing technology that has made the Tech-ni-fold Tri-creaser a phenomenal success world-wide for use on popular makes of folding machines. The depth of crease is more than three times greater than the normal steel scores used on Binding machines, so cracking simply isn't allowed to happen.

The Benefits

- Completely eliminates fibre cracking 100%
- No more outsourcing of covers for off-line creasing
- On average pays for itself within first five job runs
- Completely eradicates having to remove 'scoring' shafts from the machine
- No more sheet ripping or splitting covers completely in half during setting
- Works first time every time, avoiding unnecessary crease depth adjustment
- Simple to set and easy to use
- Produces a deeper and more flexible hinge
- Not limited by speed and works as fast as the machine can run
- Works perfectly on cross grain materials regardless of solid ink coverage
- Excellent on UV coated, laminated or Digital stocks
- Colour-coded creasing bands available for different grades of stock
