

What people are saying about the revolutionary Tri-Creaser

"We can't believe how easy it is to set and the productivity gains we are getting in such a short time."

Martin Jones, W O Jones (Printers) Limited,
Llangefni, Anglesea

"Easy setup, anyone can score with this device. Even the non experienced operator. From all the available devices in the world, this is the best one. It's a big hit in Holland."

Bert Verhuever - Wifac bv, Mijdrecht, Holland,
Leading Dutch MBO Folding Machine Agents

The specially formulated and softer creasing ribs work on the outside of the material, carefully manipulating and stretching the fibres so that cracking problems are avoided, even on coated stock. The Tri-Creaser penetrates the material much deeper than the rigid steel used with other rotary methods, guaranteeing perfect results every time.

The revolutionary **Tri-Creaser**

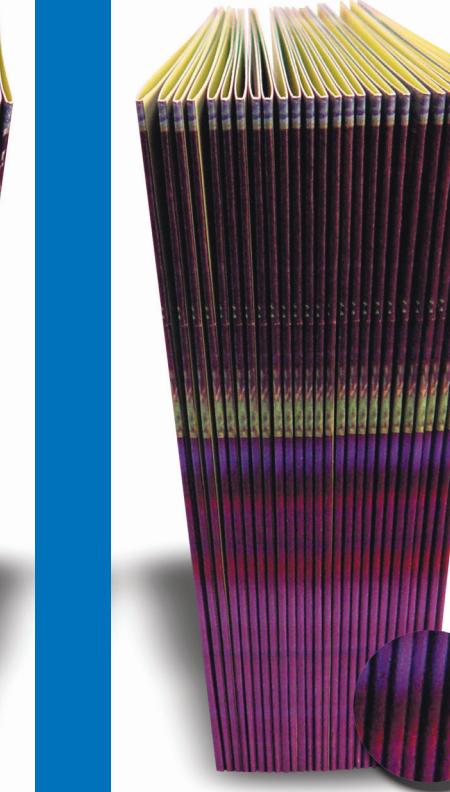

totally eliminates fibre cracking on all popular types of folding machines

Without the Tri-creaser

Using the Tri-creaser

 Fold this flap inward and see for yourself
Now read on to find out how it works...

The Tri-Creaser comes pre-set, ready to install on to your folding machines exit shafts. Both Male and Female parts slide into position where they are perfectly matched.

The Male component has a series of varying width and depth channels machined into it. Any one of two colour-coded creasing ribs can be inserted into the relevant channel. Correct combination of crease strength and style is easily achieved for any given material stock, regardless of weight or ink coverage.

The flexible creasing rib can be extracted from the device and inserted into another channel by using a special hooked tool. This simple extraction and relocation of position enables flexibility of crease style within seconds.

Tri-Creaser Benefits

- Attaches to most types of folding machines
- Surprisingly simple to use, even by inexperienced operators
- Perfect results from 100 - 350gsm
- Creates as fast as the folding machine can run
- Same crease quality as that produced on the Flatbed Cylinder only 10 times quicker
- Uses specially formulated and unique creasing technology
- Patent granted
