

## World Class Print Finishing Advice & Product Updates

Hi and welcome to this month's newsletter.

I am happy to report on many more innovative Tech-ni-Fold products, some of which are highlighted or mentioned throughout this newsletter.

The information is sometimes worded in a way that assumes you already know how a particular product may work, if you have any doubts please log onto our website to see video downloads to clarify this matter. [www.technifold.com](http://www.technifold.com)

Graham Harris, Tech ni Fold Ltd (Managing Director)

## Six new language websites launched

We have recently launched **translated versions** of our existing website in the following six languages: German, Spanish, Polish, Italian, Danish and Chinese. The home page to our international sites can be found on [www.tech-ni-fold.com](http://www.tech-ni-fold.com). Our plan is to individually promote the sites under the brand of Tech-ni-Fold in partnership with our distributor for the relevant country.

## Mini film update

We have now **uploaded two more mini videos of our latest and existing products** to our English version website. The relatively new **Spine & Hinge Creaser** can be seen in **full flow** during operation on a Muller Martini Binding machine. The four crease device has been endorsed by none other than the Muller Martini manufacturers themselves who proclaim it to be a major breakthrough in quality enhancement of the finished books.

**The second mini video** showcases exactly how the popular **Spine-creaser** works on the cover feeder of a Muller Martini saddle stitching machine.

The two short mini films compliment a series of existing footage found throughout our website and is designed to bring alive the unique solutions at hand.

We simply ask you to spend a few minutes of your time checking out the films as we are certain they will bring our products to life in a better way than merely describing them with words –

## Free creasing rib offer

Some time ago we produced a **heavy-set creasing rib** for the Tri-creaser Easy Fit (35mm exit shaft, MBO or Stahl folders only). Normally the **extra-depth** setting is far too harsh for most stocks but bodes very well for those **harder materials** that are difficult to penetrate with existing creasing ribs. **The special heavy profiled creasing rib was designed for a greetings card printer that produced up to 80,000 cards per hour on 350gsm card stock.**

This one specification adaptation **transformed** the production work flow of this major UK printing company. It's hard to think that for a **few pounds** spent in ordering a specially made rubber mould this company is now saving thousands upon thousands of pounds annually by keeping their work away from the **dreaded** letterpress creasing cylinder.

*The Deep Creasing Insert*

## Here's how to claim your free creasing rib

If you have an Easy Fit device that fits a 35mm shaft of a Stahl or MBO folder and **have a need** for the creasing rib (**order code M-71**), call Paul Barrett on **01455 55 44 91** and he will post it **free of charge**.

# Upgrade to the sensational Tri-creaser Easy Fit

There will never be a better time to own your own amazing Tri-creaser Easy Fit as we are offering the best deal yet (and it will never be repeated)

If you have an existing standard or De-lux Tri-creaser and would like to find out how you can **part exchange** it for the **vastly improved all colour-coded** Tri-creaser Easy Fit we have a special offer that you will find **irresistible**.

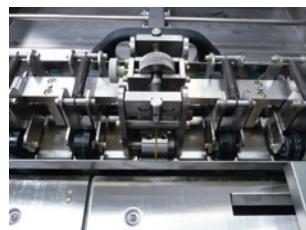

I make no apologies for encouraging those of you with **older** technology devices to upgrade to something so much easier to use with **guaranteed** longer creasing rib

usage and **enhanced** finishing quality.

Rather than filling this page with hype about why so many customers have made the change and never looked back I simply urge you to **pick up the phone** and call Paul Barrett to find out more about our extended special buy-back part-exchange offer and **free gift - (01455 55 44 91)**.

## Horizon Stitchliner device

We have now successfully developed and sold a batch of Tri-creaser attachments that retro-fit onto the Horizon Stitchliner, including 6 devices direct to UK

The Stitchliner ready to run

Horizon agents, Graphic Arts Equipment. The special split creasing design allows for a creasing rib to be inserted as a cut circular ring and **re-**

**formed perfectly** together as the two part male hub encompasses it (**you just can't see the join**). This modification allows a **quick change over of crease styles** without the operator having to remove the shafts.

Horizon Stitchliner

See image of the Tech-ni-Fold creaser installed in the shafts of the machine.

For price information and more details call **Paul Barrett on 01455 55 44 91**.

## New products

We now have the following devices added to our product range

- New Tri-creaser Easy Fit for **Dick Moll** machines
- New Spine-creaser for **Heidelberg stitching machines**, ST-350/400 & 450
- Tech-ni-Fold micro-perforator for **all** Rollerm scoring and perforating machines

Designed to fit Heidelberg 350/450 Stitching Machines

- Stop-start micro-perforation device for Stahl mailing machine

If you would like to receive more information on any of the above items please call us or email [paul@technifold.co.uk](mailto:paul@technifold.co.uk)

Fits Stahl/MBO Mailing Systems

## Upgrade for Multi-tool & special introductory offer

If you are looking to add a creasing option to your existing Multi-tool we have the answer. A newly developed crease cassette and female creasing component can be purchased to give you the same 8 crease settings that are achievable with the Easy Fit. The devise gives the added benefits of using **split rib technology** making shaft removal unnecessary when change over of crease ribs are required.

Unfortunately the add-on creasing option to the Multi-tool is only available for MBO and Stahl machines with 35mm slitter shafts (this will undoubtedly be available for other versions of folders as demand dictates)

The full crease, micro-perforation and cutting tool will **soon** be available to purchase as a **complete** solution.

The creasing cassette. A new addition for the Multi tool

If you are interested in either upgrading your Multi-tool or purchasing a full kit at a **special introductory offer** please call Paul on 01455 55 44 91.
