

What people are saying about the Tri-Creaser Advance...

"The *Tri-Creaser Advance* is a very nice system that makes my life easy. It gives us a big advantage enabling us to crease heavier stock on the folding machine without putting it on the cylinder."

Craig Barker,
The Print Centre, Warrington, UK

"Great idea, it saved us. We had a difficult job with bleeds on both sides and the grain going the wrong way, the outside looked great but the inside was cracking. We just got a new *Tri-Creaser Advance* in and after a little trial and error, both sides looked great. We had to run the job multiple times through the folder. We only had 1, the next day I ordered 2 more. They really work great. We delivered that job on time and it saved us from getting a letterpress score and missing a deadline."

Jim Navulis,
Haapanen Brothers, Illinois, USA

"We run a 300gsm silk job for a perfume brand. The job is laminated on the outside but not on the inside. The *Tri-Creaser Advance* gives a beautiful square crease result on the inside of the fold by producing a deeper impression. The *Tri-Creaser Advance* is an improvement even on previous versions."

Tony Puxty,
Fontain, London, UK

Introducing

Tri-Creaser Advance

The only solution in the world designed to tackle inside of the fold toner flaking and fibre cracking.

- Completely eliminate fibre-cracking on your folding machine
- The only solution designed to tackle inside of the fold toner flaking
- Compatible with existing Tri-Creaser Easy-Fit and Fast-Fit models; convenient and affordable Female Upgrade option available
- Never remove the device from your machine thanks to the clever and ingenious split creasing rib technology

See inside for all the details...

So how does the Tri-Creaser Advance work?

The key to the success of the Tri-Creaser Advance is how the male and female interlock.

Continuing Tech-ni-Fold's tradition of utilising a **special patented rubber rib** to gently manipulate the paper fibres during production, whilst not damaging them, the **Tri-Creaser Advance** technology goes another step further in groundbreaking development.

Continued Tech-ni-Fold Innovation

A new style female component uses a **specially profiled and patented plastic receiver ring** into which the male rubber creasing rib is positioned to form that all-important 'U' shaped crease onto which the main fold is placed. Simultaneously, the female receiver ring utilises **two outer protrusions** of its own, pushing in an upward direction, to **iron out the problem areas either side of the main crease line** which are prone to toner flaking after the fold has been applied.

The female receiver ring also incorporates the **unique split design** of the existing Tri-Creaser Fast Fit to enable **quick changeover** of crease styles.

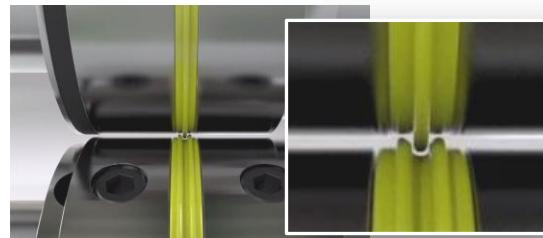

Maintaining the simple **colour-coding** of the **Tri-Creaser Easy Fit and Fast Fit models**, there are three coloured female receiver rings supplied in with each pack. Simply **match the male creasing rib with the corresponding coloured female receiver ring** to instantly begin to produce unmatched creasing results.

Creasing Simplicity

<input type="radio"/> Light	85-150gsm
<input type="radio"/> Medium	150-250gsm
<input type="radio"/> Heavy	250-350gsm

What are the benefits of the Tri-Creaser Advance?

- Greatly reduces or eliminates inside of the fold flaking and completely eliminates fibre cracking 100% on stock ranges 85-350gsm
 - 25% greater crease definition than existing creasing options
 - Produces multiple crease settings for any imaginable print/stock combination, and **works like magic** on difficult toner based digital output
 - Incorporates split creasing ribs that allows instant change of crease styles without removing exit shafts from folding machine
 - Works just as well when it creases and folds against the grain as it does with it
 - Works as fast as your folding machine can run with no limitations on speed
- Takes only minutes to set up
 - Convenient and affordable Female Upgrade option for existing users of Tri-Creaser Easy-Fit and Fast-Fit models
 - Pays for itself within 1-3 job runs
 - Saves expensive transport and outsourcing costs
 - Saves hours and hours of time
 - Gets the work to your customer faster

Interlocking Male and Female Components ensure a deep creasing impression

How do I buy the Tri-Creaser Advance?

Whether you are new to Tech-ni-Fold creasing technology or an experienced user, we have the tooling option for you. Choose one pack from the two options below:

Tri-Creaser Advance Complete

1

For **new** and **existing users...**

looking to **introduce unbeatable creasing power to your folding machine for the first time** or wanting to add a new creasing unit to your existing arsenal? Option 1, the **Tri-Creaser Advance Complete**, contains all components needed to produce better defined creasing. *Can be used alongside existing Tri-Creaser models.*

Tri-Creaser Advance Female Upgrade

2

For **existing Tri-Creaser users only...**

opt for Option 2 to use your existing **Tri-Creaser Easy-Fit or Fast-Fit male component** in combination with the **Tri-Creaser Advance Female Upgrade**.
